EXPERIENCE

Sponsorship Officer of IC FemTech Society: Helped in the organisation and planning of events and outreach to sponsors

Speaker Coordinator for IC TEDx Society: Outreach to speakers to give talks on campus

Subcommittee for the inaugural IC Medathon (Medical Hackathon): Worked with team in the running of a 2-day hackathon on campus

As a passionate bio engineering student, I want to help in the running of the annual MedTech conference and bring together high quality speakers from industry so students gain more insight into the field and its potential

SOME AIMS, GOALS & IDEAS

- Bring together speakers to share advancements in the field of MedTech, with a focus on the **unmet needs in healthcare** MedTech can help resolve
- Have representatives from MedTech companies/startups at the conference that can show their product(s) for students to interact with
- Have companies/startups at the conference **open to internship opportunities** for students to not only learn from their experience working in the field, but also **network**
- Have more **female leads** in the field give talks at the conference
- Have talks from speakers from a **variety of different background** (e.g. not just healthcare workers but engineers, computer scientists, biologists etc. that have entered the field)
