

Hello everyone! I'm YuXi Liang, a first-year PhD student in Civil and Environmental Engineering, and over the past few years, I have become very interested in working to achieve a more sustainable future for our community.

## Vote for YuXi Liang as ***Ethics and Environmental Officer!***

As your ethics and environment officer, I'd like to:

- Encourage ICL's canteens to implement the plate system or allow students to bring their own recyclable lunch boxes to reduce the use of disposable lunch boxes;
- Encourage ICL's canteens to implement different sizes of food with different prices, and add food trash cans;
- Promote the use of digital screens instead of paper, add more paper recycling bins, and let everyone know where the paper goes to give more motivation;
- Promote the use of recyclable bags and bottles;
- Reduce unnecessary lighting and power on campus day and night;
- Host events in partnership with other student groups and societies to develop activities to address environmental concerns;
- Establish a student environmental complaint mechanism, which can directly provide sustainable development suggestions;

The whole world is very concerned about climate change, and it happens that I have learned and worked in Environmental Engineering for 6 years. I have as an environmental volunteer in Australian farms and the Maldives. To achieve the world's carbon neutrality by 2050, we need to start with every little thing around us, let's work together!
